Faraz LinkedIn Kit: UK Recruitment

Profile copy, posts and messages for Faraz Mahmood's LinkedIn, aimed at UK recruitment and staffing agencies. Prepared 13 October 2026. All copy is in British English because the readers are in the UK.

What you sell: automation first, web apps second

Lead with back-office automation, not web app development. Use AI inside the automation where it helps, but don't make "AI" the headline.

	AI and workflow automation (lead)	**Web app development (second)**
What the agency buys	Hours back and less compliance risk, inside the systems it already uses	A new piece of software it has to learn and maintain
Fit with their tools	Agencies already pay for an ATS (Bullhorn lists £80–120 per user a month). Automation joins it to payroll, email and SMS	Competes with the ATS they already pay for
Competition	Few specialists do back-office admin around the ATS	Thousands of development agencies, plus recruitment-website specialists
Speed to first sale	Fixed-price quick win in 2–3 weeks	Longer scoping and bigger budgets
Repeat revenue	Monthly care plan: changes, monitoring, new automations	Mostly one-off builds

- **Build web apps only inside an automation project,** when a spreadsheet or the ATS can't do the job: a client timesheet-approval page, a compliance dashboard, a candidate document-upload portal.
- **Say "automation", not "AI".** Recruiters are pitched AI tools constantly. Use AI quietly: reading documents, sorting inbox emails, drafting chasers.
- **Never build AI that rejects or ranks candidates.** The EU AI Act treats hiring AI as high-risk (full obligations from December 2027), and New York City already requires bias audits for automated hiring tools. It also makes a strong trust message (see post 4).

Price ladder: Free 20-minute admin map → fixed-price quick win, about £2,500 → monthly care plan, about £500–1,500. These are my estimates from the decision report; adjust them after your first calls.

Before you change the profile

- **Remove** any legal-tech or e-signature wording (your client conflict), the generic "Full Stack AI" title, and the "17-person team" claim.
- **Don't name Bullhorn, Vincere or JobAdder as integrations** until you have built with them. Say "works with your ATS". Name a system only after a real or test build.
- **Don't invent results.** No client numbers, case studies or "we've helped X agencies" until they are true. Demos with test data are fine if you say so.
- **Say where you are.** "UK hours from Lahore" builds more trust than hiding it. Offshore help is normal in UK recruitment.
- **Fix forrof.io first.** Add a /recruitment page and remove the FynoSign and legal-tech pages. UK buyers will click through from your profile.
- **Target list:** UK agencies with temp or contract desks, 10–200 staff. Leave out nursing, care and other healthcare staffing (your healthcare exclusion).

Profile copy

Headline (pick one)

Option A: best for search (recommended) *(147 of 220 characters)*

Recruitment automation for UK temp & contract agencies | Timesheets, onboarding & compliance records automated inside your ATS | Co-founder, Forrof

Option B: outcome-led *(146 of 220 characters)*

I help UK recruitment agencies win back admin hours | Timesheet chasing, onboarding documents & umbrella evidence, automated | Co-founder @ Forrof

About

About section (the first 2–3 lines show before "see more", so the hook comes first) *(1977 of 2600 characters)*

Your consultants should be placing people, not chasing timesheets.

I'm Faraz, co-founder of Forrof. We build back-office automation for UK recruitment agencies that run temp and contract desks.

A temp desk's Monday often looks the same: timesheets still missing at noon, a right-to-work document that expires next week, and an umbrella company that hasn't sent last month's evidence. Since 6 April 2026 that last one matters more. Under joint and several liability, HMRC can recover unpaid PAYE and National Insurance from the agency if an umbrella company in the chain fails to pay.

What we automate
→ Timesheet chasing by SMS and email, one-click client approval, and a clean payroll and invoice export
→ Onboarding documents: collection, checks and expiry reminders (right to work, certificates, references)
→ Umbrella evidence: collected every month, filed by umbrella, flagged when pay doesn't match the agreed rate
→ Candidate re-engagement for perm desks, so your database works for you
→ Simple dashboards for missing timesheets, fill rates and compliance gaps

How we work
1. A free 20-minute admin map. We walk through one process with you and show where the hours go. You keep the map.
2. A fixed-price quick win in 2–3 weeks. We automate the biggest time-waster first.
3. An optional monthly care plan for changes, monitoring and new automations as your desks grow.

What we don't do
We don't sell you a new system, and we don't build AI that rejects or ranks candidates. Hiring decisions stay with your team. We automate the paperwork around the ATS, payroll and inbox you already use, so there is nothing new to learn.

The practical bits
• UK working hours from Lahore, fixed prices and written specs
• NDA and data processing agreement as standard; UK IDTA for data transfers
• Built with n8n, OpenAI, Twilio, React, Node.js and AWS

If your temp desk loses a morning a week to admin, message me "admin map" and I'll book 20 minutes at a time that suits you.

Experience: Forrof

Title: Co-founder | Recruitment back-office automation

Experience description *(931 of 2000 characters)*

Forrof builds back-office automation for UK recruitment agencies with temp and contract desks.

What we build
• Timesheet chasing by SMS and email, client approval links, payroll and invoice exports
• Onboarding and compliance document collection with expiry alerts
• Umbrella company evidence collection and pay-rate checks
• Integrations between your ATS, payroll, email, SMS and calendars
• Small dashboards and portals where a spreadsheet no longer works

How we engage
Free 20-minute admin map → fixed-price quick win → optional monthly care plan.

What we don't build
AI that makes hiring decisions. Your consultants make the calls; we take the paperwork away.

Stack
n8n, OpenAI, Twilio, React and Next.js, Node.js, PostgreSQL and MongoDB, AWS, Docker.

Before recruitment
[Add one or two real past projects here, for example an automation or AI integration you shipped and what it saved the client. Keep it true and short.]

Services page

Services description (kept under 500 characters; LinkedIn doesn't clearly publish this limit) *(316 of 500 characters)*

I help UK recruitment agencies with temp and contract desks automate their back office: timesheet chasing and approvals, onboarding and compliance documents, umbrella evidence and ATS integrations. Fixed prices, UK working hours, and we work inside the systems you already use. Start with a free 20-minute admin map.

Service categories: choose the closest ones LinkedIn offers, such as Custom Software Development, Application Development, Software Development, IT Consulting and Cloud Application Development (names may differ slightly). Remove anything unrelated, such as SEO, graphic design or anything legal.

Banner, featured section and basics

Banner text (image 1584 × 396 px; keep text on the right, because your photo covers the bottom-left)

Back-office automation for UK recruitment agencies
Timesheets · Onboarding documents · Compliance records · Inside your ATS
Free 20-minute admin map · forrof.io/recruitment

- **Featured 1:** a 2-minute demo video built with test data: missed timesheet → SMS → client approval → payroll export (see post 5).
- **Featured 2:** post 1, which explains what you do.
- **Featured 3:** a one-page PDF, "7 admin jobs a temp desk can automate". It gives people a reason to message you.
- **Featured 4:** the forrof.io/recruitment page, once it is live.
- **Skills to pin (top 5):** Workflow Automation, Business Process Automation, API Integration, n8n, Artificial Intelligence (AI).
- **Basics:** a clear, friendly face photo on a plain background; a custom URL such as linkedin.com/in/farazmahmood; forrof.io and a booking link in contact info; location kept true (Lahore).

Posts: the first five, ready to publish

Post twice a week (Tuesday and Thursday, 8–9am UK time, which is 1–2pm in Lahore from 25 October). Keep links out of the post; put them in the first comment. Use your own screenshots, not stock images. On the other days, leave thoughtful comments on 10 posts by UK recruitment owners and directors before sending connection requests.

Post 1: what I do and why now *(1002 of 3000 characters)*

I'm narrowing Forrof down to one job: taking admin off UK temp and contract desks.

Why this, and why now:

→ Temp billings have risen five months in a row (KPMG and REC Report on Jobs, September 2026). Busier desks mean more timesheets, more onboarding and more chasing.
→ Since 6 April 2026, HMRC can recover an umbrella company's unpaid PAYE from the agency in the chain. Agencies now need an evidence trail, not a handshake.
→ Every hour a consultant spends chasing paperwork is an hour not spent placing people.

What we build for agencies:
• Timesheet chasers by SMS and email, with one-click client approval
• Onboarding packs that collect documents and flag expiries
• An umbrella evidence folder that fills itself and flags pay that doesn't match the agreed rate
• All of it inside the ATS and payroll you already use

What we won't build: AI that decides who gets the job. That stays with your consultants.

If you run a temp desk, tell me one thing: which admin job does your team hate most?

Post 2: the timesheet maths *(811 of 3000 characters)*

Quick maths for anyone running a temp desk.

Say you have 120 temps out this week.
If one in five timesheets needs chasing, that's 24 chases.
At about 6 minutes each (find the number, text, wait, chase the client for approval), that's 2.4 hours.
Every week. Before a single invoice goes out.

Now add late approvals, holiday-pay questions and the Friday payroll cut-off.

The fix doesn't need a new system:
1. Monday 9am: an automatic SMS to every temp with a missing timesheet
2. Their manager gets a one-click approval link
3. Anything still missing at 2pm lands on one list for a consultant
4. Approved hours flow into the payroll and invoice export

Your team only handles the exceptions.

These numbers are an example; yours will differ. Send me your rough figures and I'll run them with you in 20 minutes.

Post 3: the umbrella evidence trail *(1036 of 3000 characters)*

"We use an accredited umbrella" is no longer the whole answer.

Since 6 April 2026, under joint and several liability, HMRC can recover unpaid PAYE and National Insurance from the recruitment agency if an umbrella company in the chain doesn't pay.

The REC's guidance to agencies comes down to three things: documented checks before you use an umbrella, ongoing monitoring, and records you could show HMRC.

That's three admin jobs that never end:
→ Collect evidence from every umbrella, every month
→ Check that what workers receive matches the assignment rate
→ File it so you can find it in an audit

Here's how we automate the paperwork (the compliance decisions stay with you):
• A monthly request to each umbrella with a secure upload link
• Automatic reminders until it arrives
• A check that flags payslips that don't match the agreed rate
• One folder per umbrella, per month, ready for an audit

This isn't legal advice. Ask your compliance adviser what evidence you need, then let the system collect it, not your consultants.

Post 4: what I won't automate *(807 of 3000 characters)*

The one thing I won't automate in recruitment: deciding who gets the job.

AI is useful in a recruitment business. Just not where most pitches point it.

Good uses:
• Reading a CV or certificate and filing it to the right record
• Drafting a chaser in your tone of voice
• Sorting a busy inbox so urgent client emails come first
• Spotting a missing document before a Monday start

Bad uses:
• Rejecting candidates automatically
• Ranking people with a score nobody can explain

Regulators are heading the same way. The EU AI Act treats AI used in hiring as high-risk, with full obligations from December 2027. New York City already requires bias audits for automated hiring tools.

So my rule for every build: the machine does the paperwork, your consultants make the calls.

Where would you draw the line?

Post 5: the demo (attach your 2-minute video) *(519 of 3000 characters)*

2 minutes, one timesheet, no new software.

This video shows a timesheet flow we built with test data:
1. A temp misses the Monday deadline
2. They get an SMS with a link and submit their hours from their phone
3. Their client manager approves with one click
4. The hours land in the payroll export, ready for Friday

It uses tools most agencies already pay for, with a little automation in between.

If you'd like to see how it would work with your ATS and your process, send me a message and I'll walk you through it.

Ten more hooks for later posts

- Your ATS isn't the problem. The gaps between your ATS and everything else are.
- Friday 4pm on a temp desk: what actually happens to a missing timesheet.
- Three documents that expire quietly and stop a Monday start.
- If an umbrella company failed tomorrow, could you show HMRC your checks in 10 minutes?
- Your database has thousands of candidates who would answer a text today.
- Why we start every project with a free 20-minute map, not a proposal.
- Temp is busy, perm is slow: where the extra admin goes when temp billings rise.
- The cheapest automation in recruitment: a reminder sent at the right time.
- An automation that saves 2 hours a week beats an AI tool nobody opens.
- What I learned mapping one temp desk's week, step by step. (Post this only after a real admin map.)

Outreach messages

Send by hand, about 15–25 connection requests per weekday (around 100 a week). Use Sales Navigator filters: United Kingdom; Staffing and Recruiting; 11–50 and 51–200 employees; keywords temporary OR temp OR contract OR industrial OR driving OR "supply teacher"; exclude nurse, nursing, care, healthcare. Titles: Managing Director, Founder, Director, Operations Director, Head of Compliance, Finance Director, Head of Temp.

Connection note *(159 of 200 characters)*

> Hi [Name], I build back-office automation for UK temp and contract agencies: timesheets, onboarding documents and compliance records. Would be good to connect.

Follow-up 1 (2–3 days after they accept)

> Thanks for connecting, [Name]. Quick question for someone running temp desks: what takes your team more admin time each week, chasing timesheets or keeping onboarding and compliance documents up to date?
>
> We automate that admin inside the systems agencies already use: SMS chasers, client approval links, expiry reminders and, since April's umbrella changes, a tidy evidence trail for each umbrella company. Happy to send a 2-minute demo.

Follow-up 2 (7 days later)

> Last note from me. If useful, I can map your timesheet-to-payroll process with you in 20 minutes and show the two steps that would save the most time. No cost, and you keep the map.

Offer (when they're interested)

> Temp-desk quick win, 2–3 weeks, fixed price (about £2,500). We map your timesheet, onboarding and compliance admin, then automate the biggest time-waster, usually timesheet chasing and approvals ending in a clean payroll export. You decide whether to continue once you see the hours saved.

Qualify before you quote: 30+ temps or contractors working each week; ATS access or exports; the MD, operations lead or compliance lead on the call; a named process owner; budget of about £2,500. Walk away from perm-only agencies with fewer than 5 recruiters, and from anyone who wants AI to reject or rank candidates.
